THE IMPACT OF LOCATION ON TRACK TIMES

BY GRANT HUNT

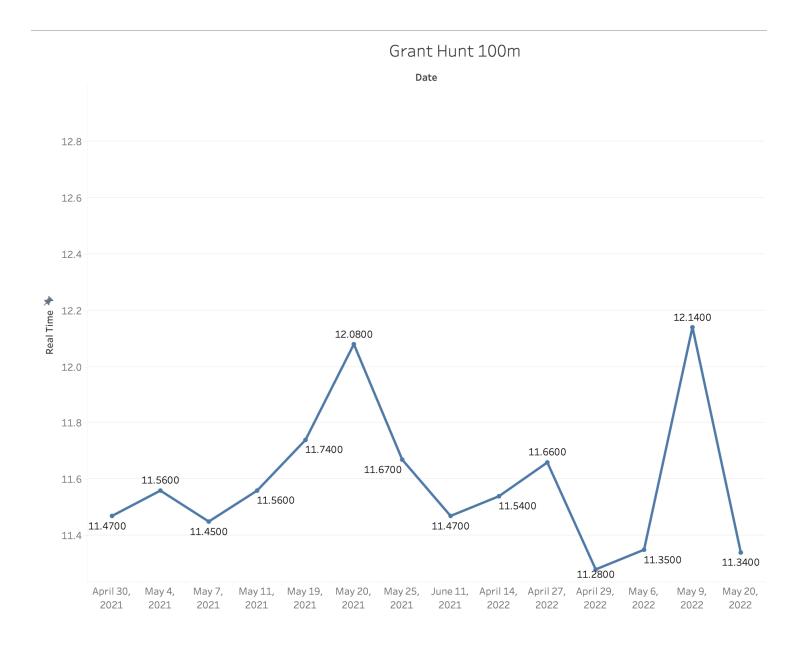

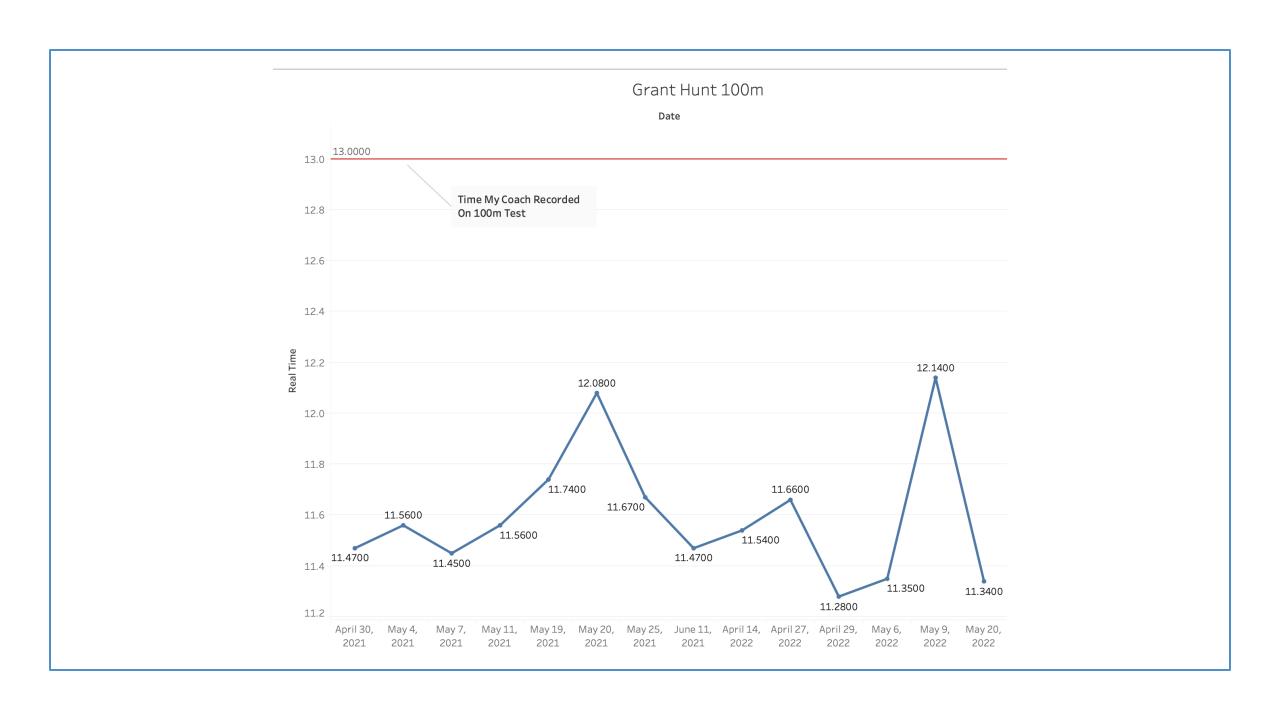

MY QUESTION

• DOES THE LOCATION AND CONSTRUCTION OF MY HIGH SCHOOL TRACK RESULT IN SLOWER TIMES FOR SPRINTERS?

of Meets Location Princeville Wethersfield Galva Elmwood Aledo Peoria Heights Knoxville Eureka

MY DATA SET

THE SET CONSISTS OF EVERY MEET PRINCEVILLE'S MEN'S TRACK AND FIELD TEAM HAS COMPETED IN IN THE PAST 3 YEARS.

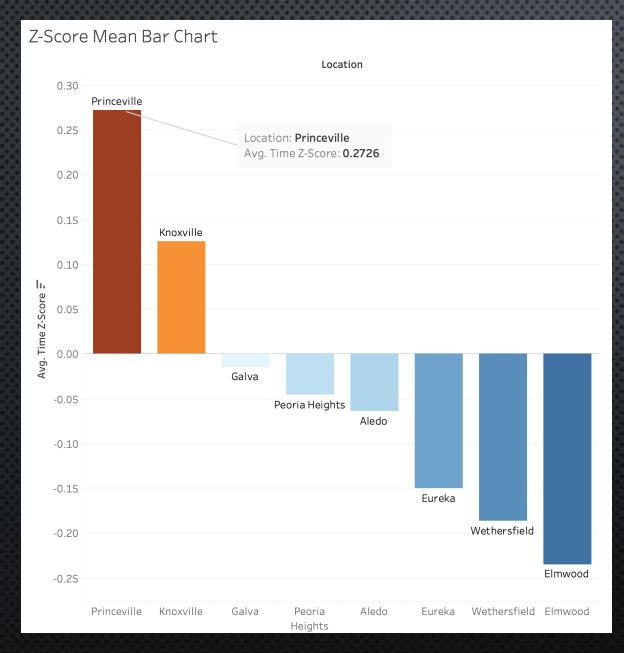

- 1,274 ROWS (EACH REPRESENTING A RESULT FROM A RACE)
- RESULTS FROM 100M, 200M, AND 400M RACES
- 29 MEETS ACROSS 8 DISTINCT LOCATION
- 405 DIFFERENT ATHLETES

METHOD OF DETERMINING SPEEDS FOR EACH TRACK

Z-Score = (average time - time)/standard deviation fixed by **race length** and **athlete**

Index	Real Time	Time Mean	Time STDEVP	Time Z-Score
99	24.43	24.60	0.17	-1.00
290	24.77	24.60	0.17	1.00

AVERAGE Z SCORE FOR EACH LOCATION

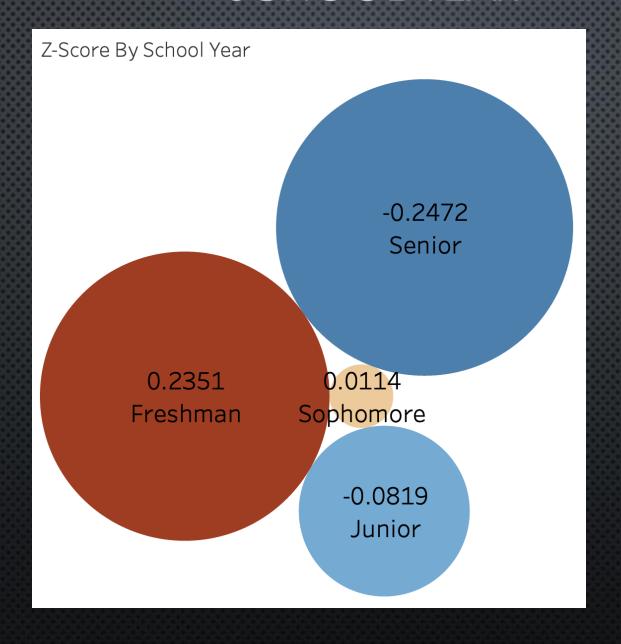

AVERAGE Z SCORE FOR EACH LOCATION

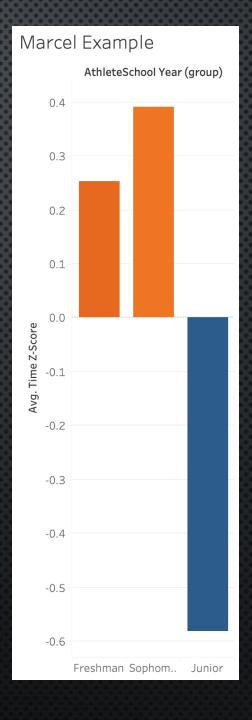

- PRINCEVILLE LOOKS THE SLOWEST OVERALL

HOWEVER, WE DON'T KNOW IF THIS IS DUE TO FACTORS SPECIFIC TO THE LOCATION (SURFACE TYPE, TRACK SHAPE, TIMING SYSTEM RELIABILITY...). THIS DIFFERENCE COULD BE DUE TO:

- SCHOOL YEAR OF ATHLETES
- TYPE OF MEET
- LENGTH OF RACE
- TEMPERATURE
- Days since the start of the season
- WIND SPEED

TYPE OF MEET

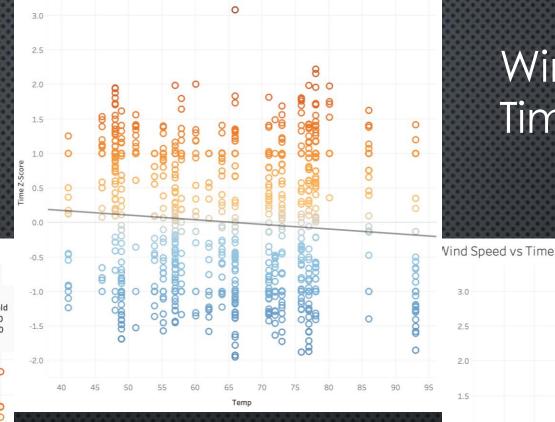

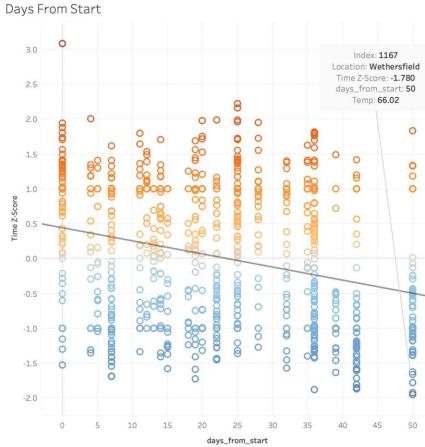

LENGTH OF RACE

Days Since Start of Season vs Time Z-Score

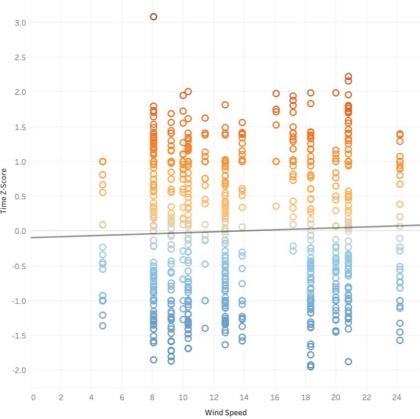

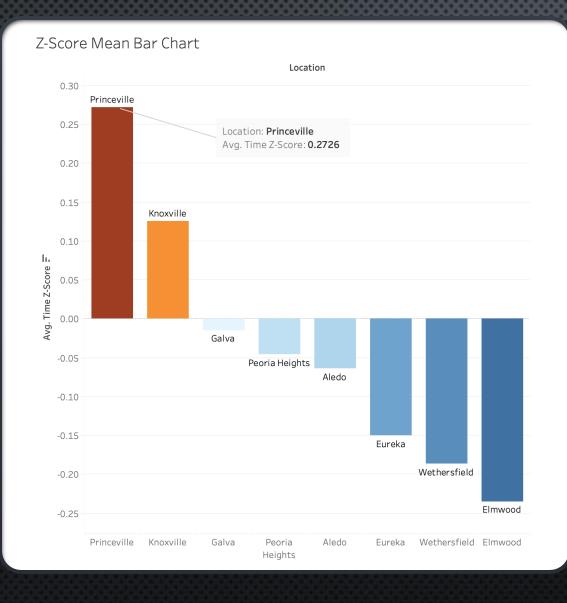

Temp VS Time

Wind Speed vs Time Z-Score

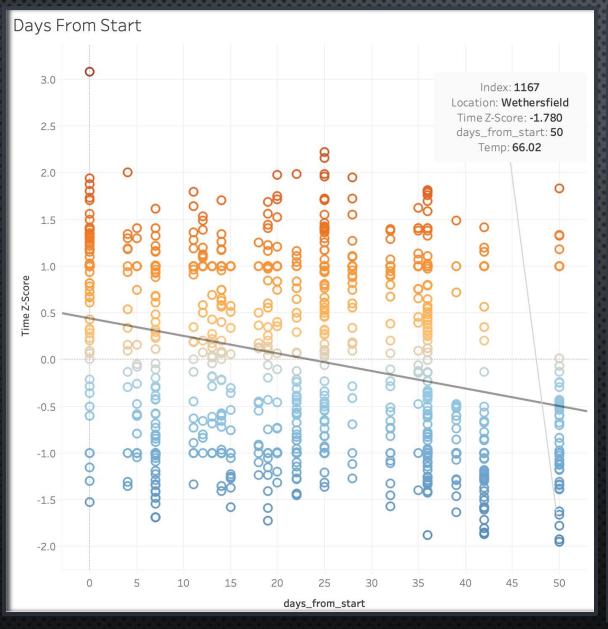

WE'VE CHECKED FOR

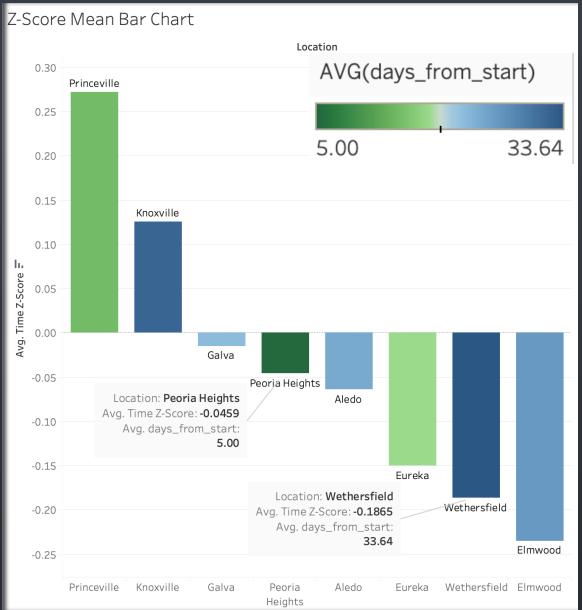

- SCHOOL YEAR
- Type of meet
- RACE LENGTH
- Days since start of season
- Temperature
- WIND SPEED

REMOVING EACH OF THESE FACTORS STILL RESULTS IN PRINCEVILLE BEING SLOWER ON AVERAGE.

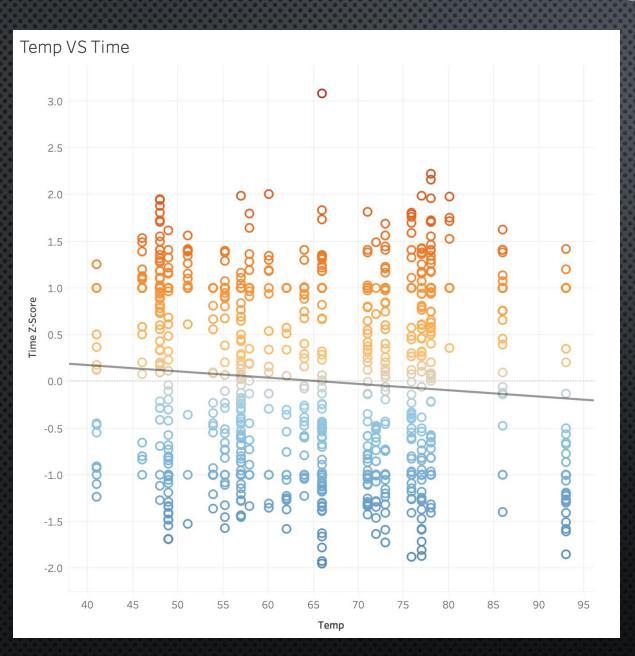

- THEREFORE, IT'S NOT CERTAIN, BUT IT'S LIKELY THAT
 THE SPECIFIC ASPECTS OF LOCATION ARE WHAT
 MAKES THE AVERAGE Z-SCORE HIGHER FOR
 PRINCEVILLE.
- SHAPE OF TRACK
- SURFACE TYPE
- CROWD ENVIRONMENT
- RELIABILITY OF FAT TIMING SYSTEM
